

ESTABLISHED SINCE '26

IN PRACTICE

SIXTEEN SETTINGS • ONE SYSTEM

Sixteen settings. One system. This booklet explains exactly how PRE:CORD works in each of them: what changes, what you get, and why it holds.

THE UK'S YOUTH DEVELOPMENT INTELLIGENCE INFRASTRUCTURE

YOUTH DEVELOPMENT STOPS DISAPPEARING.

Youth workers, mentors, teachers and coaches do good work with young people every day. Most of that work disappears.

There is no clear record of what happened. No evidence of how a young person changed. No shared understanding between the different adults supporting them.

A young person can go through years of support and leave with nothing to show for it. An organisation can deliver hundreds of sessions and struggle to prove impact to a funder. A commissioner can spend significant money on youth services and never really know if any of it worked.

PRE:CORD is the system that fixes this.

It runs alongside delivery. Every session, every reflection, every shift in behaviour or thinking is captured and structured.

That becomes three things at once: a living profile of the young person, a tracked development journey, and real-time evidence for the people who need to see it.

RUNS ALONGSIDE DELIVERY • NOTHING EXTRA
TO WRITE UP

**CAPTURE.
TRACK. PROVE.**

THE CORE LOOP

THREE JOBS. ONE SYSTEM.

01

CAPTURE

EVERY SESSION BECOMES A RECORD

Practitioners deliver as normal. The system captures what happened, how the young person responded, and which areas of their life were affected. Nothing is lost to memory or a notebook.

02

TRACK

RECORDS BECOME A JOURNEY

Individual sessions on their own tell you very little. Twenty sessions show you patterns: where a young person is improving, where pressure is building, and what is actually working.

03

PROVE

THE JOURNEY BECOMES EVIDENCE

Everyone who needs to see it does. Practitioners see it as it happens. Organisations see it building. Commissioners and funders see impact live, not six months later in a written report.

FIVE COORDINATES. ONE PICTURE.

Nothing about a young person is viewed in isolation. Behaviour in one part of their life is almost always driven by pressure somewhere else. SHAPE is how we see the whole picture.

S

SCHOOL OR SPORT

Engagement with learning, sense of belonging, leadership in the setting they spend most of their time in.

H

HOME

Coping strategies, relationships at home, and whether they have anywhere that feels safe.

A

ASPIRATIONS

Vision, goals, and whether they can see a future beyond simply getting through the week.

P

PERSPECTIVES

How they think, how they see themselves, and the labels they have accepted as fact.

E

EXPERIENCES

What has happened to them, how they have processed it, and what they have learned to believe because of it.

A student who is disruptive in lessons is rarely a School problem. Almost always, the pressure sits in Home or Perspectives, and until you can see that, you are managing a symptom.

FROM INHERITED TO OWNED.

Every young person is somewhere on this line. Everything PRE:CORD does is designed to move them along it, and to show you the movement.

// STAGE 01

LIEDENTITY

The false self, built from labels, difficult experience, and what other people decided about them. "I'm not good enough." "I can't succeed." A belief inherited, not chosen.

// STAGE 02

MYDENTITY

The performed self. The persona adopted to survive a room, a postcode, a peer group. They know it is a mask. They wear it anyway.

// STAGE 03

IDENTITY

The authentic self. Values, strengths and direction owned rather than performed. Decisions made from self-knowledge instead of fear or reputation.

+ ----- MEASURED MOVEMENT, NOT A HOPED-FOR SHIFT

This is the difference between a young person behaving better and a young person becoming different. Only one of those lasts.

BUILT TO DELIVER. **BUILT TO PROVE.**

PRE:CORD is not a database you have to fill in. It comes with everything needed to run the work as well as record it.

FOR THE YOUNG PERSON

THE PRECISION SERIES

Interactive scenario episodes that place young people inside realistic situations and make them think through choices and consequences. Localises to their postcode. Voice-enabled throughout.

THE GRADUATION RECORD

A permanent record issued at the end: where they started, what they worked through, who they became, in their own words. Theirs to keep.

THE PRECISION PASSPORT

Their own document. Tracks what they have gained and how far they have come. Belongs to them, not to the file.

THE PROGRESSION HUB

Real opportunities. Jobs, apprenticeships, work experience and programmes, connected directly to young people who are ready for them.

FOR THE PRACTITIONER

THE PRECISION PLAYBOOK

Structured exercises and reflection work across all five SHAPE coordinates. No session starts from a blank page.

PLAYER PRECISION CARDS

The sport version. Speaks the language of performance, pressure and team dynamics rather than generic youth work.

PRECISION AID CARDS

Prompt cards for opening difficult conversations, navigating hard moments, and targeting the right area in the room.

PRE-GEN

Generates structured session plans and full programmes from what the practitioner already knows. Every practitioner delivers to the same standard regardless of experience.

FOR THE ORGANISATION

THE PRECISION TRACKER

Every session logged. Patterns surfaced. The complete developmental picture across weeks and months rather than isolated notes.

SUPPORT CIRCLES

Maps everyone involved in a young person's life and defines who does what. Ends the situation where four professionals describe four different children.

THE COMMISSIONER PORTAL

Live, aggregated view of progress across cohorts, settings and boroughs. For funders and commissioners who need to see it rather than wait for it.

THE PRECISION PRINT

A live profile that explains a young person clearly: strengths, pressures, triggers, engagement, and where they are on the journey.

PRECISION ALERTS

Real-time escalation on disclosure, sustained decline, or emerging risk. Concerns surface as patterns before they surface as incidents.

SIXTEEN SETTINGS. SIXTEEN SPECIFIC ANSWERS.

The same system, applied precisely. Each section names the pressure you are actually under, what changes when PRE:CORD is deployed, what you receive, and why it holds beyond the first year.

EVIDENCED

We have delivered in that setting and hold structured data from it.

DESIGNED TO

The system is built for it and the mechanism is sound, but we have not yet delivered there at scale.

SEE SECTION 10 FOR OUR FULL EVIDENCE POSITION.

01 PRUS & ALTERNATIVE PROVISION

// THE PRESSURE

"Ofsted wants evidence of personal development. Our reintegration figures are scrutinised. We know we change these young people, we cannot prove it in any way that survives inspection."

WHAT CHANGES

Your cohort arrives carrying a fully internalised negative narrative. They have been removed from mainstream and have concluded something permanent about themselves. Behaviour management does not touch that, because the behaviour is not the problem, the belief underneath it is.

PRE:CORD addresses it directly. The LIEntity phase names the false belief, traces where it came from, and structures its replacement. From day one there is a measured starting point, and every session after that moves it.

By the time a young person leaves you, their journey is documented, not as attendance and incidents, but as identity change you can show an inspector.

WHAT YOU GET

PRECISION SERIES

PLAYBOOK

AID CARDS

PRE-GEN

TRACKER

PRECISION PRINT

SUPPORT CIRCLES

ALERTS

GRADUATION RECORD

THE OUTCOMES

- Documented identity progression that reads as transformation, not compliance
- Personal development evidence Ofsted can assess directly
- Reintegration decisions supported by structured data rather than staff judgement alone
- Emotional patterns that surface distress weeks before it becomes an incident
- Young people leaving with a Graduation Record that travels to their next setting

// WHY IT LASTS

Evidence compounds, each cohort strengthens your own impact case. It becomes your operating method rather than a bolt-on programme. Staff turnover stops erasing knowledge, because the Prints carry the relational history. And inspection cycles do not go away.

02 MAINSTREAM SECONDARY SCHOOLS

// THE PRESSURE

"We have forty students on the at-risk register. Pastoral capacity is stretched. Exclusions are climbing and every one costs us. We have no structured method, just individual staff doing their best."

WHAT CHANGES

You deploy against a targeted cohort rather than the whole school. The at-risk register becomes the intake list.

The first thing you learn is why a student is disengaging, and it is almost never what the classroom suggests. SHAPE surfaces pressure in Home or Perspectives that the school cannot see and has no way of asking about.

Then the Reframe Triggers work gives students a named alternative to the moments that currently end in removal. Not a conversation about behaving better. A specific, rehearsed response to the specific situation that keeps escalating. The Tracker tells you within weeks whether it is working.

WHAT YOU GET

PRECISION SERIES

PLAYBOOK

AID CARDS

TRACKER

PRECISION PRINT

COHORT PRINT

SUPPORT CIRCLES

ALERTS

THE OUTCOMES

- Reduction in repeat incidents among the tracked cohort
- Personal development and cultural capital evidence for inspection
- Pastoral staff working from a method rather than instinct
- Students who can name their triggers and articulate an alternative
- Early warning on students drifting toward exclusion

// WHY IT LASTS

Every exclusion avoided is a measurable saving you can attribute. The cohort expands year on year as the method proves out. It becomes your inclusion framework rather than an intervention, and a successful single-school deployment is usually what starts the trust-level conversation.

03 SPORT ACADEMIES & CLUBS

// THE PRESSURE

"We invest years in players and lose them to character, not ability. Governing bodies are asking harder duty-of-care questions every season. A welfare officer and a PSHE session is no longer an answer."

WHAT CHANGES

Coaches get tools built for their world. Player Precision Cards speak the language of pressure, discipline and team dynamics, which is why they actually get used, where generic youth work tools get abandoned in week two.

Squad logging takes ninety seconds after training. One session record covers the group, with individual flags on the players who stood out. No coach is being asked to write fifteen separate entries.

What surfaces is the thing you have always suspected but never been able to name: the off-pitch pressure limiting on-pitch consistency. It is usually Home or Experiences. And once it is visible, it is addressable.

WHAT YOU GET

PLAYER PRECISION CARDS

COHORT LOGGING

COHORT PRINT

PRECISION PRINT

TRACKER

PRE-GEN

PRECISION SERIES

PROGRESSION HUB

GRADUATION RECORD

THE OUTCOMES

- More consistent performance as off-pitch pressures get identified and addressed
- Improved squad dynamic through developed emotional and communication capacity
- Reduced academy dropout, players feel seen as people, not assets
- Duty-of-care evidence that goes well beyond welfare paperwork
- Structured support for released players, who currently fall off a cliff

// WHY IT LASTS

Player development records become standard practice rather than an add-on. Governing body scrutiny is increasing, not decreasing. The Progression Hub gives you a real answer for players who do not make it. And squad turnover means continuous new intake every season.

04 LOCAL AUTHORITIES & COUNCILS

// THE PRESSURE

"We commission youth services and find out whether they worked after the contract has ended. We are accountable for NEET figures, exclusions and violence reduction, and our evidence arrives too late to act on."

WHAT CHANGES

The contract relationship changes completely. Instead of a quarterly report written by the provider, you see live cohort progression, benchmark distribution and engagement trends across every commissioned setting.

That means mid-contract decisions become possible for the first time. An underperforming cohort is visible in week six rather than month nine, while something can still be done about it.

And because every provider is working within the same framework, you can finally compare them.

WHAT YOU GET

COMMISSIONER PORTAL

COHORT PRINT

TRACKER

PRECISION PRINT

SUPPORT CIRCLES

ALERTS

PROGRESSION HUB

CASE STUDY GENERATION

THE OUTCOMES

- Commissioning decisions grounded in live evidence rather than retrospective reporting
- One coherent framework across multiple commissioned providers
- Reportable movement on NEET, exclusion and engagement metrics
- Early intervention that reduces escalation into costlier statutory services
- Delivery quality visible in real time, reducing poor-provider risk

// WHY IT LASTS

It becomes borough infrastructure rather than a commissioned programme. The data dependency runs both ways, which makes renewal structurally likely. Year-on-year comparison only gets more valuable as the dataset deepens. And it expands naturally into early help, youth justice and the virtual school.

05 YOUTH CHARITIES & COMMUNITY ORGANISATIONS

// THE PRESSURE

"We do genuinely good work and we cannot prove it rigorously enough to move past small grants. Every funding round we write the same narrative with the same thin numbers."

WHAT CHANGES

PRE:CORD does not change what you deliver. It changes what you can prove.

The Tracker captures the work already happening. Case studies generate from real data instead of taking a staff member three weeks to write. Funders see impact live rather than reading about it a year later.

This is the route from grant dependency to commissioned services. The evidence threshold that currently blocks you is exactly what the system produces as a byproduct of delivery.

WHAT YOU GET

PRECISION SERIES

PLAYBOOK

AID CARDS

PRE-GEN

TRACKER

PRECISION PRINT

CASE STUDY GENERATION

COMMISSIONER PORTAL

GRADUATION RECORD

THE OUTCOMES

- Funding applications led by live evidence rather than projected outcomes
- Case studies generated in minutes instead of weeks of staff writing
- Referral credibility with schools and councils improves immediately
- Young people leave with a documented journey rather than a memory
- Delivery consistency across staff of varying experience

// WHY IT LASTS

The evidence base compounds into the case for multi-year and commissioned funding. Organisational credibility rises with every reported cohort. The reporting burden reduces permanently, which gives capacity back to delivery. And the method becomes how you train new staff.

06 MULTI-ACADEMY TRUSTS

// THE PRESSURE

"We have eighteen schools taking eighteen different approaches to inclusion. We cannot compare them, cannot see which is working, and cannot move a student between them without losing everything we knew."

WHAT CHANGES

One decision deploys across the entire estate. For the first time you can compare inclusion practice between schools using the same measures: which pressures are showing up where, which settings are producing movement, and which are not.

And a student moving between trust schools carries their Precision Print with them. Nothing is lost in transfer. The receiving school understands them on day one instead of week six.

WHAT YOU GET

COMMISSIONER PORTAL

COHORT PRINT

TRACKER

PRECISION PRINT

PLAYBOOK

AID CARDS

PRE-GEN

PRACTITIONER PRINT

CASE STUDY GENERATION

THE OUTCOMES

- Comparable inclusion data across every school for the first time
- Best practice identifiable and transferable between settings
- Student transfers preserve relational and developmental history
- Cost per pupil collapses relative to single-school deployment
- Trust-level evidence for Ofsted, board and DfE reporting

// WHY IT LASTS

It becomes the trust's standard inclusion infrastructure. New schools joining adopt it automatically. Central team ownership means it survives individual staff changes. And a trust-wide dataset becomes an asset nobody wants to give up.

07 YOUTH OFFENDING & JUSTICE SERVICES

// THE PRESSURE

"We are statutorily required to evidence that our interventions reduce reoffending. What we actually have is caseworker notes and a hope that the relationship is doing something."

WHAT CHANGES

The identity progression maps directly onto desistance theory, the evidence base you are already required to work from. Moving a young person from LIEntity to Identity is, in desistance language, secondary desistance: a change in self-concept rather than just behaviour.

That is the thing you have never been able to measure. Incident logs show you what someone did. PRE:CORD shows you how they reasoned, session by session, and whether that reasoning is shifting.

WHAT YOU GET

PRECISION SERIES

AID CARDS

TRACKER

PRECISION PRINT

SUPPORT CIRCLES

ALERTS

CASE STUDY GENERATION

PROGRESSION HUB

GRADUATION RECORD

THE OUTCOMES

- Structured desistance evidence rather than narrative caseworker judgement
- Reasoning change tracked directly, not inferred from behaviour
- Court and panel reports supported by evidenced progression
- Multi-agency alignment across statutory partners
- Progression Hub addresses the employment gap that drives reoffending

// WHY IT LASTS

Statutory reporting obligations do not go away. HMIP inspection evidence improves with every cohort recorded. Once embedded in statutory process, replacement cost is very high. And longitudinal reoffending data becomes nationally significant over time.

08 VIRTUAL SCHOOLS & LOOKED-AFTER CHILDREN SERVICES

// THE PRESSURE

"Every time a child moves placement or school, we start again from nothing. Their history walks out with the previous worker. And I have a statutory duty to evidence PEP progress across all of them."

WHAT CHANGES

This is the handover problem, and the Precision Print solves it directly.

A child in care who changes placement three times a year currently loses their entire relational history each time. What works with them. What sets them off. Who they trust. All of it walks out of the door with whoever left.

The Print travels with the child. The next worker understands them in minutes rather than months. Meanwhile the SHAPE data feeds PEP evidence without anyone writing it separately.

WHAT YOU GET

PRECISION PRINT

SUPPORT CIRCLES

TRACKER

COHORT PRINT

ALERTS

GRADUATION RECORD

CASE STUDY GENERATION

THE OUTCOMES

- Placement and school moves stop erasing developmental history
- PEP evidence generated from delivery rather than written separately
- New workers understand a child in minutes rather than weeks
- Cohort-level view of LAC developmental position across the authority
- Emotional drift detected across settings, not just within one

// WHY IT LASTS

Every local authority in the country has a Virtual School Head with this duty. Continuity value increases the longer a child is in the system. The statutory obligation makes it permanent rather than discretionary. And it expands naturally into fostering, leaving care and early help.

09 HOUSING ASSOCIATIONS

// THE PRESSURE

"We spend a significant community investment budget on youth work in our estates and cannot evidence a single outcome to our board. Meanwhile antisocial behaviour cases keep coming through the same addresses."

WHAT CHANGES

You have the budget, the residents and the obligation. What you do not have is a method, which is why the spend produces goodwill and photographs rather than outcomes.

PRE:CORD converts community investment into evidenced social value, in a form your board and regulator accept.

And the Home coordinate matters more here than in any other setting. You are working with young people in the housing context that is shaping them. That is a level of relevance no external provider has.

WHAT YOU GET

PRECISION SERIES

PLAYBOOK

AID CARDS

TRACKER

COHORT PRINT

PROGRESSION HUB

CASE STUDY GENERATION

COMMISSIONER PORTAL

FORUMS

THE OUTCOMES

- Social value evidence in a form the board and regulator accept
- Reduction in antisocial behaviour cases from engaged households
- Progression Hub connects residents directly to employment pathways
- Tenancy sustainment improves where young people find direction
- Community investment shifts from goodwill spend to evidenced programme

// WHY IT LASTS

Social value reporting requirements are tightening, not loosening. Estate-based cohorts renew continuously as young people age in. Association budgets are substantial and less volatile than grant funding. And almost nobody else is talking to you about this.

10 FE COLLEGES & SIXTH FORMS

// THE PRESSURE

"We lose a fifth of our first-year cohort. Funding follows retention, so every withdrawal is direct income loss, and we usually find out someone has gone when they simply stop turning up."

WHAT CHANGES

Withdrawal is preceded by drift, and drift is exactly what the system captures. A student disengaging in October is visible in the data long before they disappear in January.

That gives you a window that currently does not exist.

Underneath that, the Aspirations work addresses the actual root cause of most withdrawals: students on the wrong course because nobody helped them work out what they wanted before they enrolled.

WHAT YOU GET

TRACKER

ALERTS

PRECISION PRINT

COHORT PRINT

PLAYBOOK

PRODUCTIVITY CALENDAR

PROGRESSION HUB

COMMISSIONER PORTAL

THE OUTCOMES

- Retention risk identified weeks before withdrawal
- Direct, attributable income protection through reduced drop-out
- Aspirations work reduces wrong-course withdrawals in later cohorts
- Progression Hub improves destination data at exit
- Independent study habits built rather than assumed

// WHY IT LASTS

Retention is directly financial, so the return is calculable and repeatable. New intake every September creates a permanent annual cycle. Destination data strengthens your own recruitment position. And deployment naturally expands from at-risk cohort to whole first year.

11 FAITH & COMMUNITY YOUTH ORGANISATIONS

// THE PRESSURE

"We have the young people, the building, and volunteers who genuinely care. What we do not have is any method, we are improvising every week and hoping it lands."

WHAT CHANGES

You already have the hardest thing to build: trust and relationship. What is missing is structure.

PRE-GEN matters most here. A volunteer with no youth work background can deliver a structured, sequenced session from their first week. Not because they have been trained for months, but because the planning is done for them.

The method fills the gap without displacing what already works.

WHAT YOU GET

PLAYBOOK

AID CARDS

PRE-GEN

PRECISION SERIES

TRACKER

FORUMS

GRADUATION RECORD

THE OUTCOMES

- Volunteers delivering structured sessions rather than improvising
- Consistency across weeks and across different volunteers
- Safeguarding practice formalised through alerts and structured recording
- Evidence that unlocks small grant funding previously out of reach
- Young people receive method as well as warmth

// WHY IT LASTS

It spreads laterally through community networks. Volunteer turnover is high, and the method survives where individuals do not. Low-cost entry builds long-term institutional relationships. And word of mouth in these networks is exceptionally strong.

BUILT TO SERVE. NOT YET DELIVERED.

The system is built to serve these settings and conversations are underway. We have not yet delivered at scale in any of them.

SPECIAL SCHOOLS & SEND PROVISION

SHAPE measures life domains rather than academic attainment, which is what EHCP outcomes address. Delivery content requires accessibility adaptation before full deployment.

NATIONAL GOVERNING BODIES OF SPORT

Consistent duty-of-care and development data across an affiliated club network, data that has never previously existed at sport-wide level.

UNIFORMED & CADET ORGANISATIONS

Existing progression culture maps naturally onto the identity journey and Keys system, without displacing established award structures.

EMPLOYERS & CSR PARTNERS

Access to young people with an evidenced development profile rather than a blank CV, and CSR investment that produces attributable outcomes.

HEALTH & EARLY INTERVENTION SERVICES

Structured support for young people below clinical threshold. PRE:CORD is prevention and early intervention. It is not therapy, treatment or a mental health service, and is never presented as one.

WHERE THE EVIDENCE STANDS.

Most organisations in this sector make impact claims they cannot substantiate. We would rather tell you exactly what our evidence covers, what it does not, and how to read every other page in this booklet.

SMALL. AND REAL.

Everything below comes from delivery that has actually happened. Not projections, not pilots we hope to run, not what the system could theoretically produce. These are records generated by practitioners working with young people, captured at the point of delivery.

98

SESSIONS LOGGED

Each one structured at source with engagement, emotional movement and reasoning captured.

39INTELLIGENCE
RECORDS

Complete developmental profiles built from accumulated session data.

04COHORTS
DELIVERED

Across school, alternative provision and sport settings in South London.

100%

QUERYABLE NOW

Every figure above can be broken down by cohort, setting or period on request.

// FIGURES CURRENT AS OF THIS EDITION • UPDATED EACH PUBLICATION

YEARS OF DELIVERY IS NOT YEARS OF EVIDENCE.

There are organisations in this sector that have worked with thousands of young people over two decades and cannot produce a single structured, comparable data point. Their impact lives in case notes, staff memory and annual reports written from recollection.

We built the evidence layer before we built the volume. Every session delivered from the first one has been captured in a form that can be aggregated, compared and interrogated. Nothing has been lost. Nothing needs retrospective reconstruction.

So the honest position is this: our dataset is early, and our architecture is not. We are not asking you to trust that we will build evidence infrastructure at some point. It is built and running. What accumulates from here is scale.

WHAT WE CLAIM. WHAT WE DON'T.

This booklet describes sixteen settings. We have delivered in some of them. The rest are settings the system is built to serve, based on how the framework works and what those settings need. We do not blur the two.

// WE DO CLAIM

- The system captures structured developmental data at the point of delivery, today, in live settings.
- Every figure we publish is traceable to actual sessions and can be verified on request.
- The framework is proprietary and complete, not adapted from an existing model.
- Commissioners and funders can see live cohort progression rather than waiting for reports.
- Practitioners deliver to a consistent standard regardless of individual experience.

// WE DO NOT CLAIM

- That we have delivered in every setting described in this booklet.
- That we hold independent third-party evaluation.
- That we have multi-year longitudinal outcomes. The system is too young for that.
- That our dataset is statistically significant at its current scale.
- That the system is a clinical or therapeutic intervention. It is neither, in any setting.

We use two phrases deliberately throughout. The difference between them is the difference between what we have seen and what the system is built to do. Nowhere in this document do we use one to mean the other.

EVIDENCED

We have delivered in this setting and hold structured data from it. Ask and we will show you.

DESIGNED TO

The system is built for this and the mechanism is sound, but we have not yet delivered here at scale. Treat it as a considered proposition, not a proven result.

THE REAL FOOTPRINT

Being precise about this matters more than sounding bigger than we are. Everything we hold comes from these contexts.

// GEOGRAPHY

SOUTH LONDON

Croydon, Lambeth and Southwark. The framework was built inside these communities rather than imported into them.

// SETTINGS

SCHOOLS · AP · SPORT

Mainstream secondary cohorts, alternative provision, and sport academy squads. Not yet housing, justice or further education.

// COHORT

AGES 12–18

Young people referred for disengagement, behavioural risk, or developmental support rather than open-access groups.

THE EVIDENCE ROADMAP

We are not waiting for the evidence base to build itself. These are the specific commitments in motion.

IN MOTION**Free school delivery programme**

A limited number of schools and alternative provisions receiving the Precision Series at no cost, in exchange for permission to report anonymised outcomes. This is how the multi-setting dataset gets built.

BUILDING**Multi-setting cohort expansion**

Deliberate expansion into the settings this booklet describes but where we hold no data yet. Each new setting converts a "designed to" into an "evidenced".

ONGOING**Published cohort findings**

As the dataset reaches meaningful scale, we will publish what it shows, including where outcomes were weaker than expected. An evidence base that only ever reports success is not an evidence base.

YOU CAN CHECK *EVERY* *NUMBER HERE.*

We have put this page in a public document because the alternative is worse. Overstated impact claims survive exactly until someone asks a hard question, and the people we most want to work with are the people who ask hard questions.

If you want to see the underlying data, ask. We will show you the cohort breakdowns, the session records, and the aggregation behind any figure in this booklet. That offer is open to commissioners, funders, partners and anyone considering working with us.

IF YOU ARE READING THIS AS A POTENTIAL EARLY PARTNER

Your cohort does not just receive the system. It becomes part of the evidence base that opens this work up for the sector. The organisations that come in now are the ones the case gets built on.

THREE WAYS TO START.

There is no long procurement process to begin a conversation. Pick whichever fits where you are.

01

A CONVERSATION

Thirty minutes to understand your setting, your pressures, and whether PRE:CORD is genuinely the right fit. If it is not, we will tell you.

02

A DEMONSTRATION

We walk you through the system using real cohort data. You see the Tracker, the Precision Print, and the Commissioner Portal working rather than described.

03

THE FREE DELIVERY PROGRAMME

A limited number of schools and alternative provisions are receiving the Precision Series at no cost this year, in exchange for permission to report anonymised outcomes. Places are limited and allocated by fit.

START THE CONVERSATION
